

Enveloped

Installed systems for high-performance construction

If you're looking to design or build a Certified Passive House, Homestar-rated home, or target higher than the Building Code, talk to the team at Enveloped. Send us your concepts or plans, and we can help you specify which systems will be most suitable for your renovation or new build project. Then we install them, properly. We offer expert advice for designers and builders, and can also engage directly with clients to help create a healthy, comfortable, and efficient living environment to suit all budgets. **The earlier we are involved, the more we can help.**

If you're a designer specifying systems such as Intello from pro clima, balanced heat recovery ventilation systems, potable water or hydronic heating, or German window joinery, let the team at Enveloped take ownership to deliver a quality outcome. We provide various options for insulation solutions. **Specify "Installed by Enveloped" on your plans** for peace of mind and reduced costs and delays on site. With years of experience in high-performance homes and having built our own Certified Passive House Plus, 10 Homestar show-home, we understand the complexities of these projects as well as the importance of proper sequencing. We also even install Izodom ICF (insulated concrete formwork) for high performance slabs, walls and midfloors.

Give us a call or drop us an email - we'd love to discuss your project.
