Re: USE OF POST-INDUSTRIAL RECYCLED GLASS IN THE GLASSWOOL INSULATION PRODUCT

To Who it may concern,

PGF Insulation Sdn Bhd produced Brownie Wall and Ceiling slabs that is comprised of the following contents:

Fiberized glass > 92%
Proprietary binder < 8%
Mineral oil < 2%

Brownie glasswool insulation draws its glass or silica content 100% from recycled glass that would have been sent to landfill otherwise.

The insulation protects the environment by diverting large quantities of waste glass from the waste stream and landfills by using recycled glass in the manufacturing process.

The use of recycled glass as a material in the manufacturing process results in less energy required for melting, conserve virgin resources.

If you require any further information or clarification, please do not hesitate to contact me directly.

Yours sincerely,

Paul Roberts
